

Team Name: Algo Warriors

Members: Rahul Basak, Aden Zhao, Arnav Kaul

PM: Samara Silverman

PM Meeting insights: Being too strict with our lint will only be a detriment. Furthermore, we should put effort into making our frontend look nice.

Challenges that arose: Streamlit is very new to us, so there is always a learning curve there. Learning github action workflows was very tough. We have a test that checks if the dataset exists in the correct file repository, so we had to download the dataset through kaggle in the workflow. Debugging that was a pain.

What went well: When we finally got the workflow running correctly, though, it was really cool. It'll probably save us time in the long run from catching errors.

For each member: what were your main takeaways from the “breaking assumptions” exercise?

Aden: My main takeaway from the “breaking assumptions” exercise was that Arnav values learning new, diverse things, which is why he is down to do any part of the assignment.

Arnav: My main takeaway from the “breaking assumptions” exercise was that Aden values hard work, but struggles with laziness when he is alone.

Rahul: I wasn't present for the exercise :

For the group: what, if anything, will the group take away from “breaking assumptions” exercise?

As a group, we understand better that voicing our opinions more freely is okay, as long as we properly set boundaries and expectations that everyone understands.
